

CHLORINE TABLETS

GENERAL DESCRIPTION

Chlorine tablet contains an active ingredient of 70% calcium hypochlorite. It dissolves slowly and releases available chlorine uniformly over a period of time thus saving repeated application. Has a slightly alkaline reaction with water. Will evolve free chlorine if come into contact with acid.

TYPICAL APPLICATION

It is used for the treatment of sewerage systems and disinfecting of water supply systems.

Treatment of Sewerage Systems

For sanitation of discharged waste of sewerage system. Tablet is added into system to maintain the residual chlorine at the range of 10 to 20 ppm.

Disinfection of Water Systems

To disinfect reservoir water, tablet is added into the water to maintain a residual chlorine of 0.2 to 0.5 ppm. Initial recommended dosage should be 1 to 2 tablets per 4.5 tons of water.

RECOMMENDED DOSAGE

TONS OF WATER	NO. OF TABLETS
4	1 - 2
8	2 - 3
16	4 - 5
32	8 - 10
64	16 - 20
